The Setra Systems AQM5000 and AQM7000 Series Air Quality Monitors measure 0.3 µm to 25 µm-sized particles with mass concentration and stores indoor air quality measurements of temperature, relative humidity, CO<sub>2</sub>, and TVOC in select configurations.

## Indoor air quality

Setra's AQM Series monitors make it easy and affordable to monitor indoor air quality in a single device - perfect for monitoring indoor air quality in healthcare facilities, cleanrooms, office building lobbies and other public spaces.

## 6 user-selectable particle size channels

The AQMs reports and displays 6 user-selectable particle size channels, as well as carbon dioxide (CO<sub>2</sub>), temperature, and relative humidity. Select configurations included a PID Sensor for TVOC. The instrument monitors PM 1, PM 2.5, PM 5, PM 10 & TPM (and any other PM size value the user specifies) with an easy-to-use Channel Management control panel. The instrument also monitors flow, sensor status, date of last calibration, serial number, laser on-time, and date of manufacture for easy maintenance and warranty management.

## User-friendly interface

User-friendly field calibration for the integrated environmental sensors allows for single or dual point offsets, and ensures accuracy for air quality investigations. View data and generate environmental reports in real time on screen, via printer or USB key, or export to Setra Systems Instrument Management Software. Setra Systems instruments can be controlled and monitored remotely via web browser from any PC, tablet or smartphone supporting 20 concurrent user sessions.

## Advanced data storage

The AQM5000 and AQM7000 can store up to 45,000 time stamped particle counts and environmental data records which provides data redundancy on every instrument. The instruments' mass concentration mode approximates density in µg/m³ and allows for density and refractive index corrections to ensure accuracy. All Setra Systems particle counters and air quality monitors meet ISO 21501-4 and JIS B9921.

## Power management & sleep modes

The AQM7000 series has advanced power management capabilities and the industry's first sleep mode, allowing for battery operation of periods that can exceed a month on a single charge. The AQM7000 Series can be used as a stand-alone battery operated instrument or it can be easily integrated into a building automation and facility monitoring system via Ethernet, USB or (optional) Wireless 802.11 b/g, RS485 or RS232 connection.
